

线激光器是高均匀度、高直线度、高稳定、窄线宽、低散斑、长寿命的激光光源，内部集成驱动控制，与工业相机或者CMOS图像处理器配合可以用于形貌检测。根据被检测物体，可定制紫外、蓝光、绿光、红光、红外等多种波长。

3D machine vision is a necessity in the field of industrial inspection due to the requirement to improve the efficiency and quality of manufacturing. Lasers are used in combination with industrial cameras to detect and measure defects, presence, diameters, edges, gaps, etc.

Depending on the type of object to be inspected, line lasers with uniform and fine line projections of different wavelengths of blue, green, red and infrared are usually available.
